## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Any **one** of either Figure 1, or Figure 4/5 or Figure 6 or Figures 9/10 or Figures 9/11 or Figure 15 or Figure 17 or Figure 19 or Figure 24 or Figure 25 or Figure 26 or Figure 27.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

**Applicant is required to point out (ie list) which claims read on the elected invention.**

The following claim(s) are generic: No claim may be deemed to be generic in view of the excessive number of embodiments.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: each of the presented species includes different structure that is not included in the remaining disclosed species. This is readily apparent from evaluating each of the Figures. (For example, Figure 4 employs a distinctly different angle for the propagating light than that of Figure 1, Figure 5 employs a fiber channel 32 that is not utilized in either of Figures 1 or 4, Figure 9 employs a V shaped channel that is not utilized in prior disclosed species, Figure 15 employs a particularly shaped head at the end of the cantilever that is not utilized in prior disclosed species, Figure 17 employs application of particularly described tips that is not utilized in prior disclosed species, Figure 19 employs a projecting section not found in prior disclosed species, Figure 24 employs core and cladding and gap that allows for a high coupling efficiency, Figure 25 employs a silicone light-blocking wall that is not employed in prior disclosed species, Figures 26 and 27 employ different light-blocking films that are not employed in prior disclosed species. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
